FOR IMMEDIATE RELEASE

PREVIEW SERVICES: FASTEST GROWING SERVICE PROVIDER

Preview has become the first scanning services provider in the UK to install three IBML IT III scanners in a single site with a fourth on its way. When added to the Company's other specialist digitisation equipment, Preview's Heathrow facility is one the largest and most modern bureaux in Europe, with a huge capacity for converting paper and capturing data.

With the ability to work 24 hours a day, the IBML IT III systems have the capacity to scan over 15 million images a month in high density and with optional OCR and ICR capability. Preview's UK and offshore teams then extract and process data extremely fast and present it to clients in a variety of formats.

Preview's Commercial Director was naturally delighted at the growth of the Company in recent years; 'We believe Preview is the fastest growing service provider of its kind in the UK. Our policy of acquisition and organic growth has helped us to understand the issues faced by our clients and our staff are some of the best in their field. 'With high capacity UK systems and access to several thousand staff through our offshore partners, there are very few companies in the UK that can offer our capacity and quality.'

In recent months, Preview has taken on several new contracts to convert data for clients in fields as diverse as Distribution, Education, Public Authority, Legal and Financial Services. These companies range from multinationals such as Toshiba and Carillion to smaller companies primarily from the financial and IT sectors. All had the same basic requirement for instant and secure access to their documents and the information they contained and were looking for a full service scanning solution from a company able to deliver against their needs.

Servicing companies at both ends of the business spectrum and across a number of targeted sectors has given Preview an in-depth understanding of the benefits they can gain from scanning and how best to achieve them. The additional capacity that the latest IBML scanner will offer will allow them to expand this further still.
